Located on the edge of the Great Dividing Range and situated an easy 2½ hours drive from Brisbane and the Sunshine Coast is the South Burnett Region. The region is an untapped natural wonderland, home to the ancient Bunya Mountains, two of Queensland's biggest inland waterways (Lake Boondooma and Bjelke-Petersen Dam) and Australia's longest sealed rail trail. The South Burnett is also becoming an influential wine growing region, boasting award winning wines and boutique wine experiences. Our vibrant, welcoming communities offer a choice of education, medical, sporting, shopping and recreational facilities and incorporate 8 towns and 6 villages, with the largest town and commercial centre being Kingaroy.

Creating a safe and strong community for children and families

## Do you have a child under 5?

## Make the early years count by connecting with your community

# About Us

4610 Partnership for Kids recognises the importance of the early years in a child's life, and knows that early experiences contribute to that child's future outcomes.

The group believes that partnerships between all members of a child's 'village' leads to a safe and strong community for children and their families.

4610 Partnership for Kids aims to decrease risk factors and increase protective factors for infants and children in the South Burnett area through locally driven solutions.

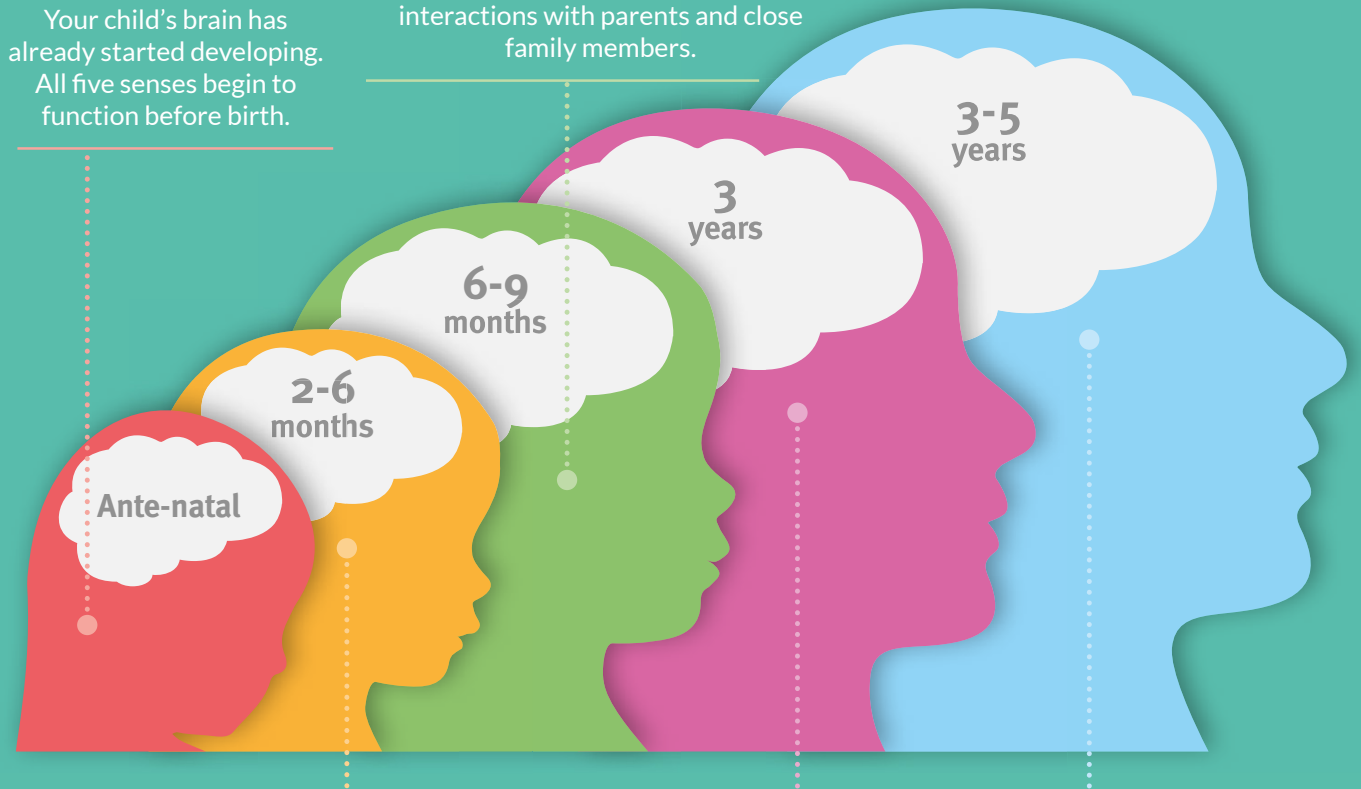

If you would like to know more about our community group please contact us on [partnershipsforkids4610@outlook.com](mailto:partnershipsforkids4610@outlook.com)

# Help your baby's brain grow by connecting

**Ante-natal**  
Your child's brain has already started developing. All five senses begin to function before birth.

**6-9 months**  
By nine months your child's brain can form connections between what they see, hear, feel and taste. Key learning opportunities for early development are provided through interactions with parents and close family members.

**2-6 months**  
Your baby's brain is developing as a result of the experiences and relationships they are exposed to each day.

**3 years**  
By three years of age a child's brain has around 1000 trillion brain connections (synapses)

**3-5 years**  
By school, a child's brain development is built upon the now solid foundation created in the first five years.
